

LAURUS Decon Kits

Personal Pre/Post Decon Modesty Kits

The **LAURUS** Personal Decon Kits address the procedural and logistic issues of mass decontamination operations while offering unparalleled cost-effectiveness. Other factors absent from products of this type have been garment durability and waste management of radioactively contaminated materials. The Personal Decon Kit utilizes patented **OREX** products that are made from a special, degradable polymer that is tough, breathable, and environmentally friendly. Following deployment, used products can be treated offsite using a proprietary process that dissolves the product, decontaminates it, and ultimately converts it to carbon dioxide and water.

Responsiveness and commitment to the end-user is further illustrated by the fact that LAURUS provides the only Decontamination and modesty clothing specifically designed for the smaller (child) user; until now, a forgotten patient group that will require more privacy and durability capabilities than any other users.

- **Maximum Modesty and Patient Privacy**
- **Comfortable, Extremely Durable Garments**
- **Accountability of Personal Belongings**
- **Environmentally Friendly**
