

# FIVE MAN RAD-SAFETY KIT

- ⇒ DETECTION
- ⇒ LOW LEVEL EXPOSURE

- ⇒ DECON
- ⇒ EGRESS

The Five-Man RAD-Safety Kit is designed to provide advance warning of radiation levels in the field via the RADOS RAD-60 Dosimeter. The kit also provides the ability to measure residual contamination on persons or equipment via the Inspector-EXP.

The Dosimeters display both dose and dose rate and records and maintains the individuals exposure level. The RAD-60 operates on a single AAA battery. Also included in the kit are heavy weight trash bags and duct tape to contain exposed equipment that can later be De-Contaminated. Liquid Soap-hand wipes and towels are included for personal decontamination. In addition, there are five complete sets of PPE and five full-face respirators for low-level protection and safe egress. All of this in a sturdy weather proof, wheeled case for easy storage and transport.

## RAD-SAFETY KIT CONTENTS

- |                                       |  |
